

# HEAPSORT E STRUTTURA DATI "HEAP"

ALGORITMO	COMPLESSITÀ'	SUL POSTO
INSERTION-SORT	$O(n^2)$	SI
MERGE-SORT	$\Theta(n \log n)$	NO
HEAPSORT	$\Theta(n \log n)$	SI

L'ALGORITMO HEAPSORT E' BASATO SULLA STRUTTURA DATI HEAP, PER LA GESTIONE EFFICIENTE DI CODE DI PRIORITÀ,

## HEAP

UN HEAP (BINARIO) E' UNA STRUTTURA DATI BASATA SU ALBERI BINARI QUASI COMPLETI (RAPPRESENTATI IN MANIERA EFFICIENTE MEDIANTE ARRAY) SODDISFACENTI UNA PROPRIETA' DELL' HEAP :

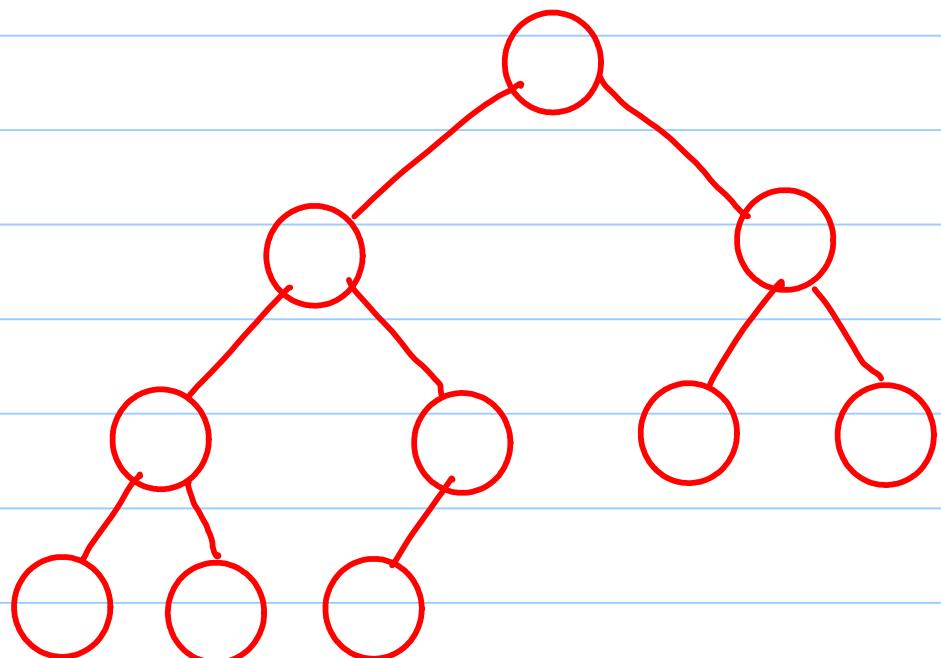

PROPRIETA' DEL MAX-HEAP: IL VALORE DI UN NODO E'  
MINORE O UGUALE AL VALORE DEL PADRE (SE ESISTENTE)

PROPRIETA' DEL MIN-HEAP: IL VALORE DI UN NODO E'  
MAGGIORI O UGUALE AL VALORE DEL PADRE (SE ESISTENTE)

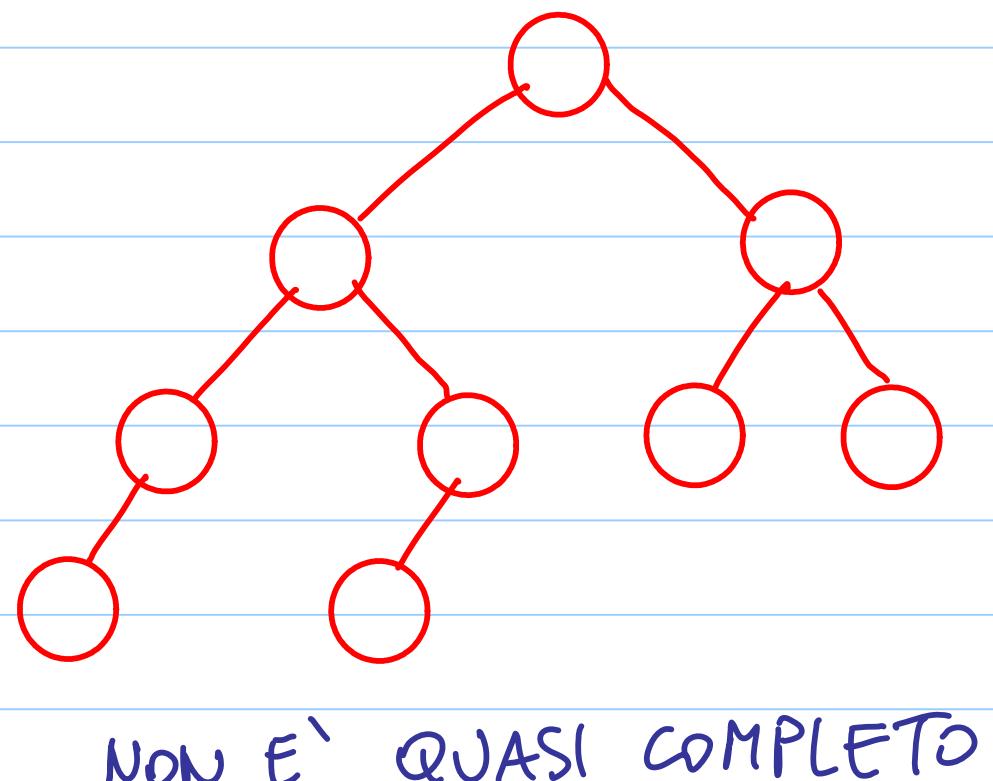

## ALBERI BINARI QUASI COMPLETI

SONO ALBERI BINARI POSIZIONALI TALI CHE:

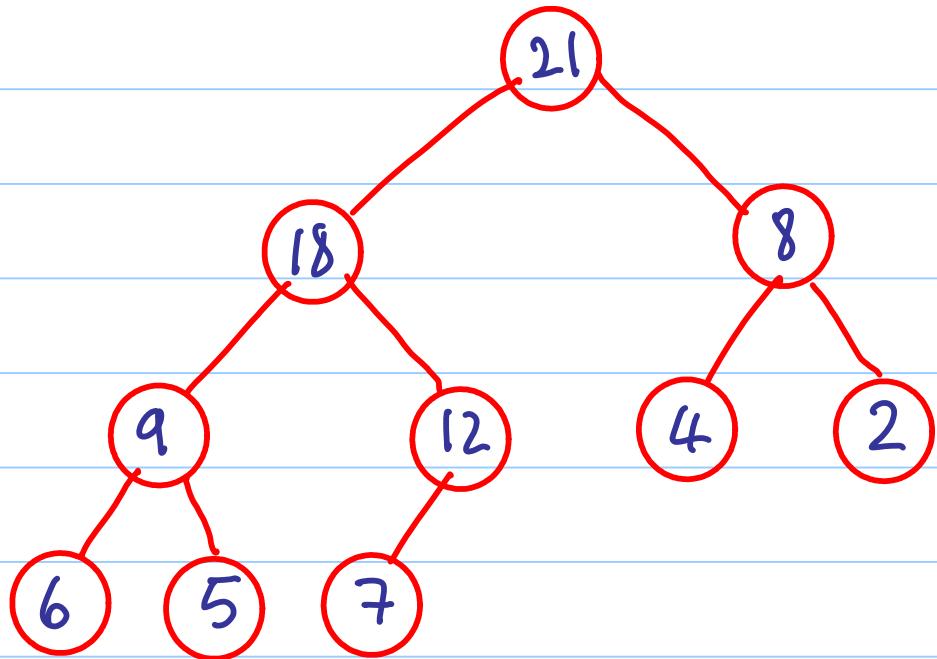

- TUTTI I LIVELLI, AD ECCEZIONE POSSIBILMENTE DELL'ULTIMO, SONO COMPLETI
- NELL'ULTIMO LIVELLO TUTTE LE FOGLIE SONO ADDOSSATE A SINISTRA

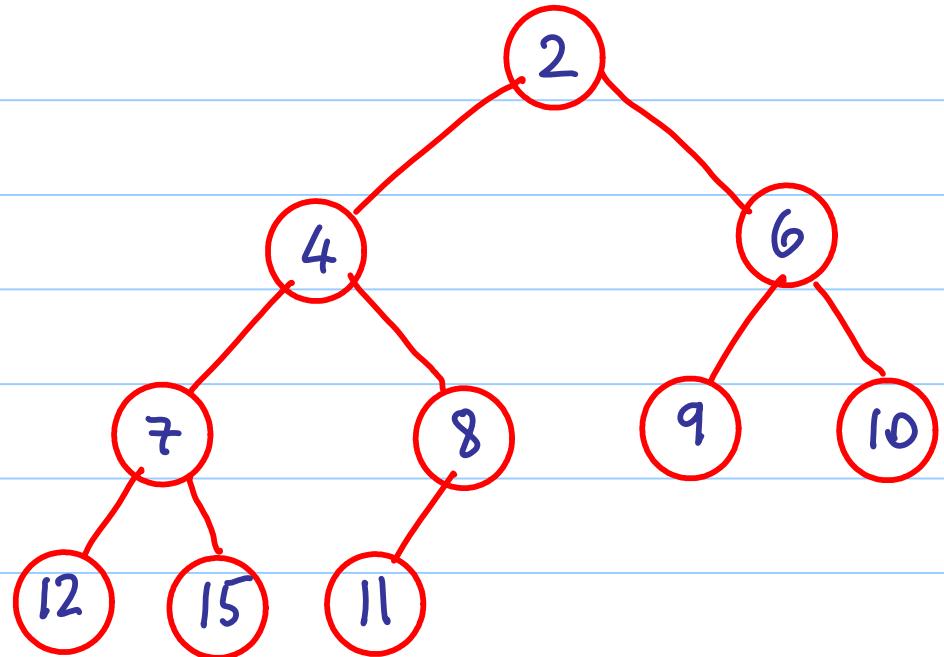

QUASI COMPLETO

NON E' QUASI COMPLETO

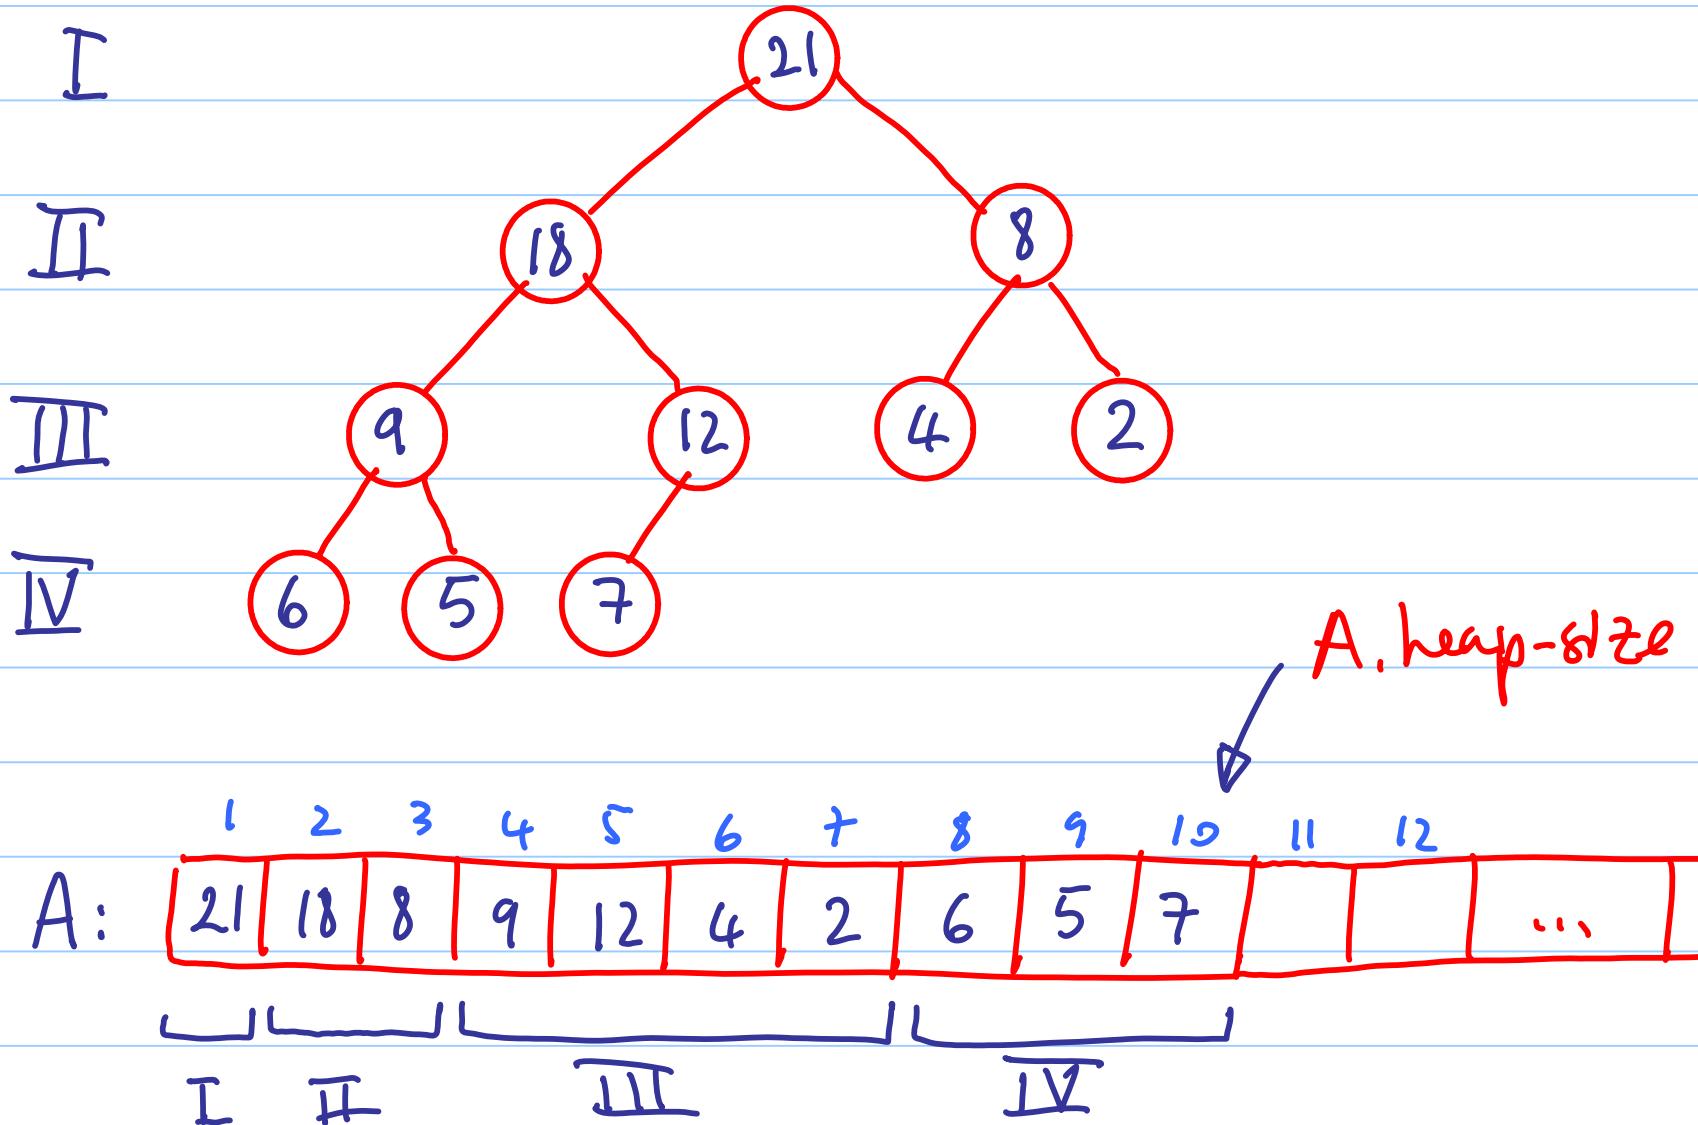

MAX - HEAP

MIN - HEAP

## RAPPRESENTAZIONE MEDIANTE ARRAY

(MAX-HEAP)

ARRAY A CON ATTRIBUTI

- $A.length$  (LUNGHEZZA)
- $A.heap-size$  (DIMENSIONE DELL' HEAP)

RADICE DELL' HEAP :  $A[1]$

FIGLI DEL NODO  $i$  :

$$\text{LEFT}(i) = 2i$$

$$\text{RIGHT}(i) = 2i+1$$

PADRE DEL NODO  $i$  :

$$\text{PARENT}(i) = \lfloor i/2 \rfloor$$

PROPRIETA' MAX-HEAP :

$$1 < i \leq A.heap-size \implies A[\text{PARENT}(i)] \geq A[i]$$

## PROPRIETÀ

- IL PIÙ GRANDE ELEMENTO IN UN MAX-HEAP È NELLA RADICE
- IL PIÙ PICCOLO ELEMENTO IN UN MIN-HEAP È NELLA RADICE

ALTEZZA DI UN NODO : NUMERO DI ARCHI NEL CAMMINO  
SEMPLICE PIÙ LUNGO DAL NODO FINO AD UNA FOGLIA

ALTEZZA DI UN HEAP : ALTEZZA DELLA RADICE

## PROPRIETA'

L'ALTEZZA DI UN HEAP CON  $n$  ELEMENTI E'  $\lfloor \log n \rfloor$   
(DUNQUE  $\Theta(\log n)$ )

DIM SIA  $h$  L'ALTEZZA DI UN HEAP CON  $n$  ELEMENTI.

LIVELLO	# NODI ( $n_i$ )
0	1
1	2
2	$2^2$
3	$2^3$
⋮	⋮
$h-1$	$2^{h-1}$
$h$	$1 \leq n_h \leq 2^h$

SI HA:

$$n = \sum_{i=0}^h n_i = \sum_{i=0}^{h-1} 2^i + n_h \\ = 2^h - 1 + n_h$$

$$2^h \leq 2^h - 1 + n_h \leq 2^h - 1 + 2^h = 2^{h+1} - 1$$

CIOE'  $2^h \leq n < 2^{h+1}$

$$h \leq \log n < h+1$$

$$h = \lfloor \log n \rfloor .$$

## LEMMA

SE  $2^{\lfloor \log n \rfloor} \leq i \leq n$ , IL NODO  $i$  È UNA FOGLIA.

DIM SIA  $h$  L'ALTEZZA DI UN HEAP CON  $n$  ELEMENTI.

LIVELLO	# NODI ( $n_i$ )
0	1
1	2
2	$2^2$
3	$2^3$
:	:
$h-1$	$2^{h-1}$
$h$	$1 \leq n_h \leq 2^h$

SI OSSERVI CHE I NODI A LIVELLO  $h = \lfloor \log n \rfloor$  SONO FOGLIE,  
QUESTI HANNO UN INDICE  $i$  TALE CHE:

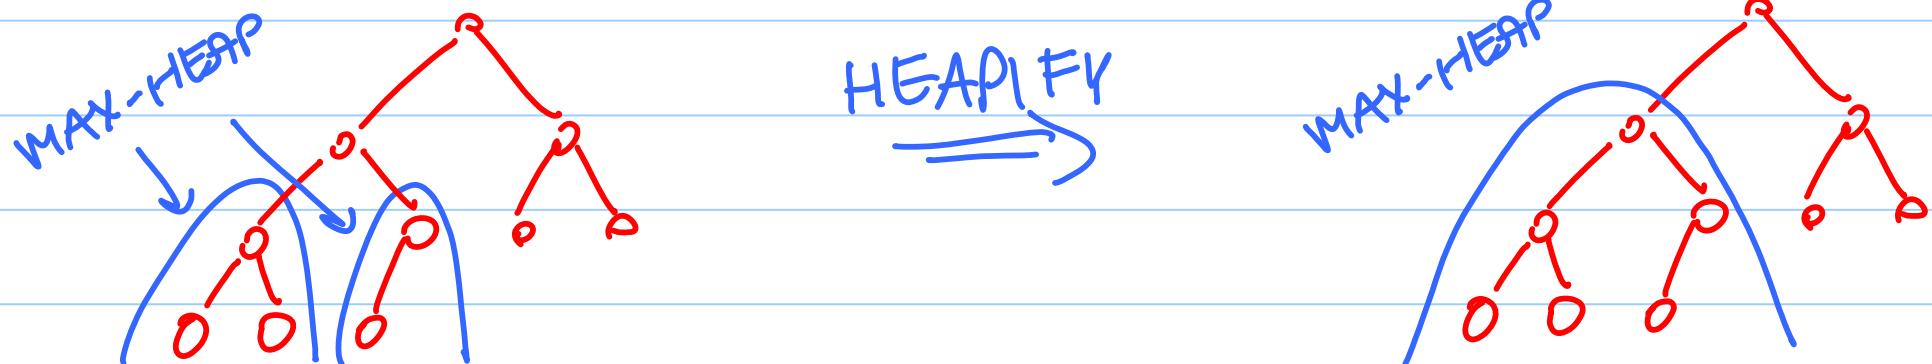

$$n \geq i \geq \sum_{i=0}^{h-1} 2^i + 1 = 2^h - 1 + 1 = 2^h = 2^{\lfloor \log n \rfloor},$$

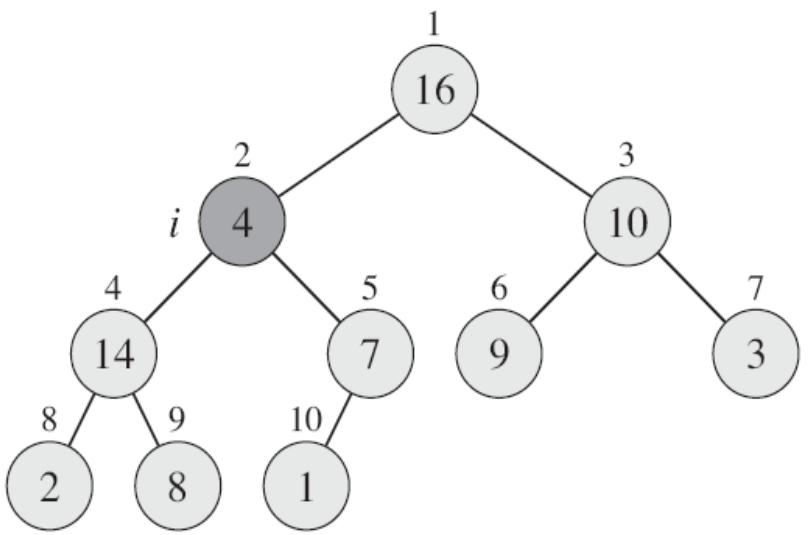

# PROCEDURE

## MAX-HEAPIFY

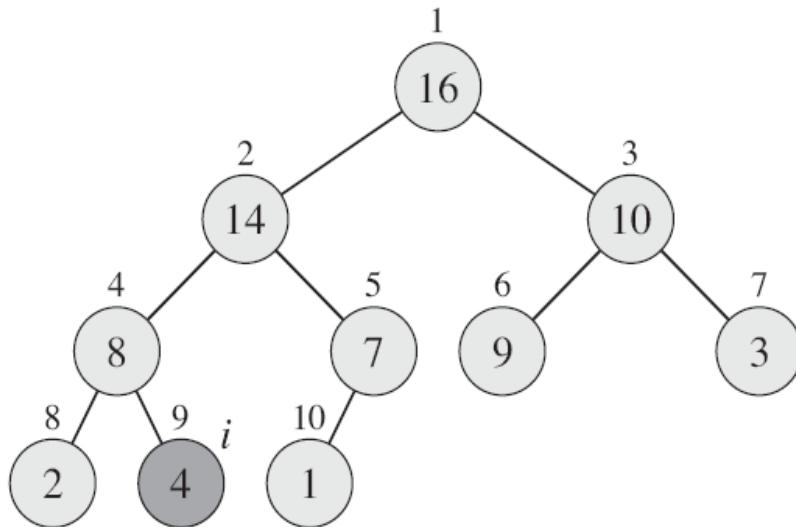

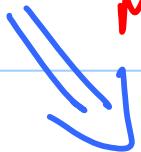

INPUT: UN ARRAY  $A$  E UN INDICE  $1 \leq i \leq A.length$   
TALI CHE GLI ALBERI CON RADICI  $LEFT(i)$  E  
 $RIGHT(i)$  SIANO MAX-HEAP

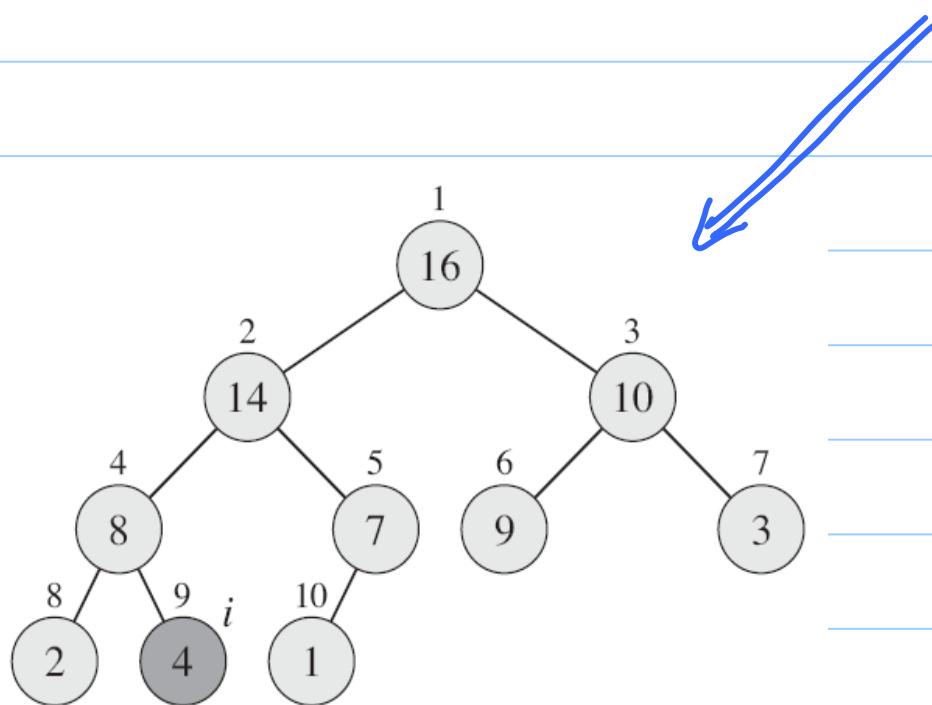

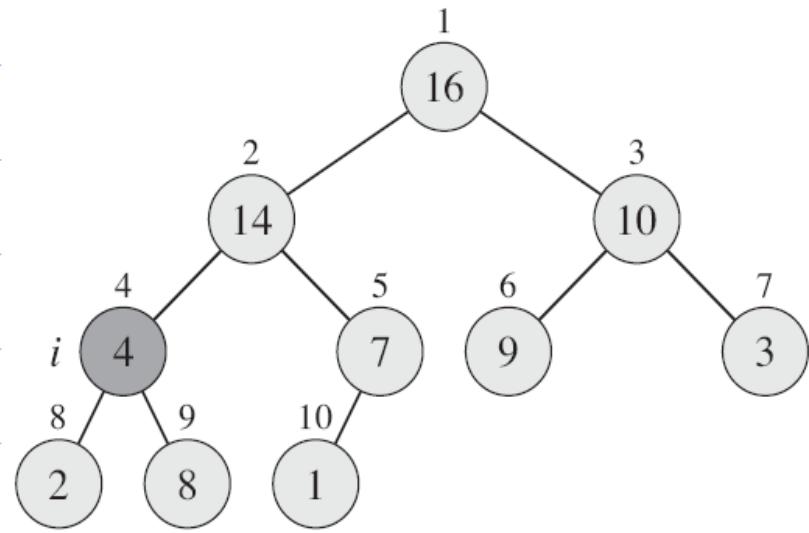

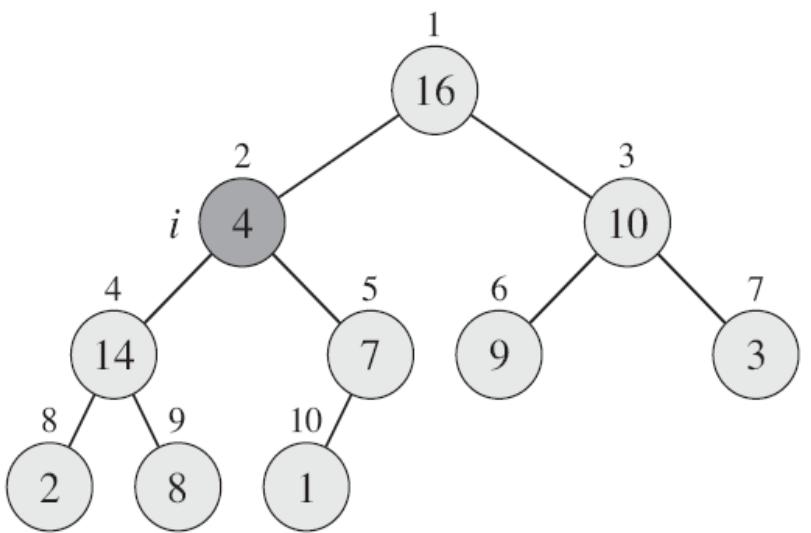

OUTPUT: UNA PERMUTAZIONE DELL'ARRAY  $A$  TALE CHE  
L'ALBERO CON RADICE  $i$  SIA UN MAX-HEAP

MAX-HEAPIFY ( $A, 2$ )

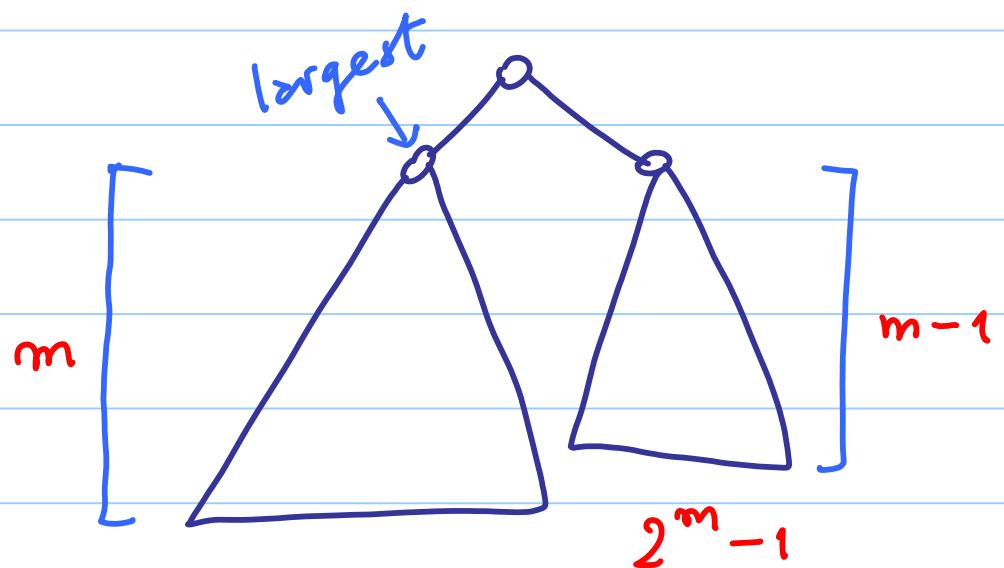

## MAX-HEAPIFY( $A, i$ )

```
1   $l = \text{LEFT}(i)$ 
2   $r = \text{RIGHT}(i)$ 
3  if  $l \leq A.\text{heap-size}$  and  $A[l] > A[i]$ 
4       $largest = l$ 
5  else  $largest = i$ 
6  if  $r \leq A.\text{heap-size}$  and  $A[r] > A[largest]$ 
7       $largest = r$ 
8  if  $largest \neq i$ 
9      exchange  $A[i]$  with  $A[largest]$ 
10     MAX-HEAPIFY( $A, largest$ )
```

## COMPLESSITA' MAX-HEAPIFY

$$T(m) = T(\text{size\_of}(A[\text{largest}])) + \Theta(1)$$

CASO PEGGIORE

$$\begin{aligned} m &= 2^{m+1} - 1 + 2^m - 1 + 1 \\ &= 2^{m+1} + 2^m - 1 \\ &= 3 \cdot 2^m - 1 \end{aligned}$$

$$2^m = \frac{m+1}{3} \quad 2^{m+1} = \frac{2}{3}(m+1)$$

$$2^{m+1} - 1$$

$$\text{size\_of}(A[\text{largest}]) = \frac{2}{3}(n+1) - 1$$

$$\text{size\_of}(A[\text{largest}]) = \frac{2}{3}(n+1) - 1 = \frac{2n}{3} - \frac{1}{3} < \frac{2n}{3}$$

E DVNQUE

$$T(n) \leq T\left(\frac{2}{3}n\right) + \Theta(1)$$

$$a=1, b=\frac{3}{2}$$

$$\log_b a = 0$$

$$n^{\log_b a} = \Theta(1)$$

TEOREMA  $\implies$  MASTER

$$T(n) = O(\log n)$$

## COSTRUZIONE DI UN HEAP

IDEA:

- LE FOGLIE GODONO DELLA PROPRIETA' MAX-HEAP
- SE  $k$  E' IL MASSIMO DEGLI INDICI DEI NODI INTERNI,  
LE CHIAMATE

MAX-HEAPIFY ( $A, k$ )

MAX-HEAPIFY ( $A, k-1$ )

...

MAX-HEAPIFY ( $A, 2$ )

MAX-HEAPIFY ( $A, 1$ )

CONSENTONO DI PROPAGARE LA PROPRIETA' MAX-HEAP  
ANCHE AI NODI  $k, k-1, \dots, 2, 1$ .

$$\begin{aligned}
 i \text{ FOGLIA} &\iff n < 2i \leq 2n \\
 &\iff \frac{n}{2} < i \leq n \iff \left\lfloor \frac{n}{2} \right\rfloor + 1 \leq i \leq n
 \end{aligned}$$

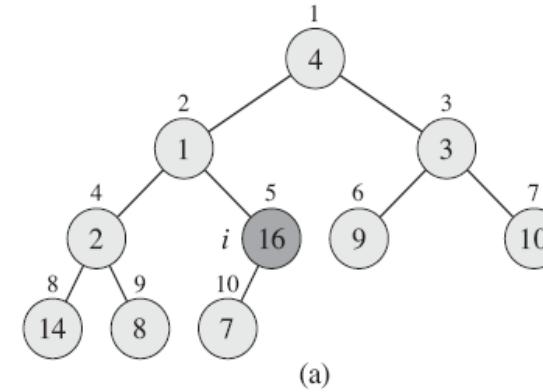

QUINDI IL MASSIMO DEGLI INDICI DEI NODI INTERNI E'  $\left\lfloor \frac{n}{2} \right\rfloor$ .

BUILD-MAX-HEAP( $A$ )

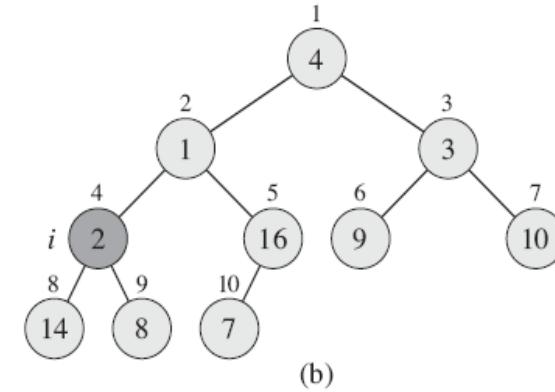

- 1  $A.\text{heap-size} = A.\text{length}$
- 2 **for**  $i = \lfloor A.\text{length}/2 \rfloor$  **downto** 1
- 3     MAX-HEAPIFY( $A, i$ )

# ESEMPIO

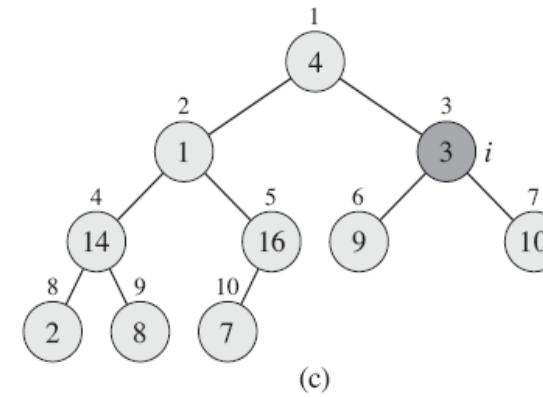

A [ 4 | 1 | 3 | 2 | 16 | 9 | 10 | 14 | 8 | 7 ]

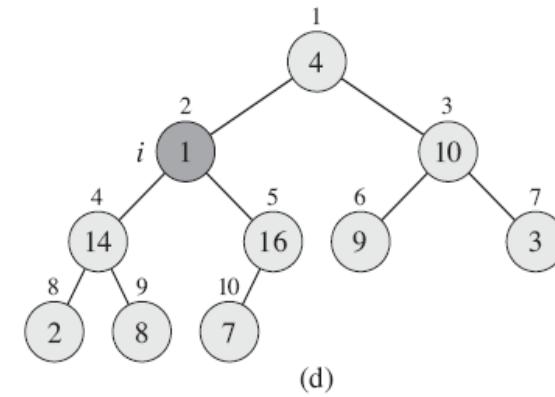

(a)

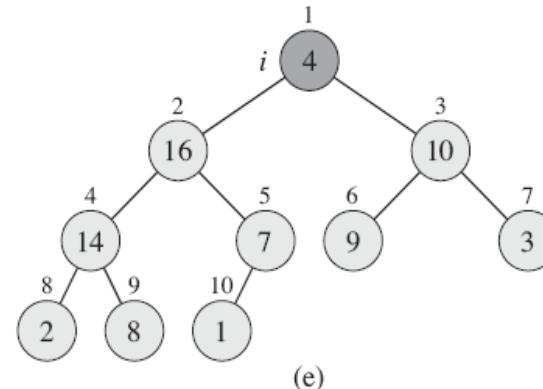

(b)

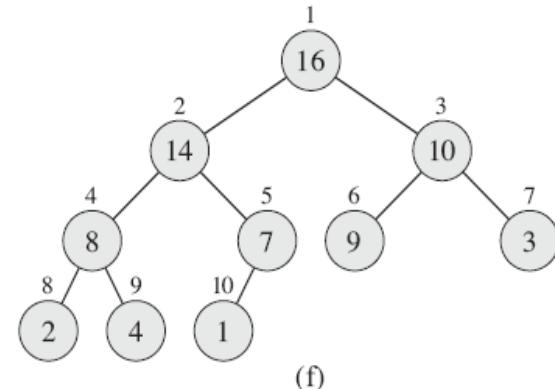

(c)

(d)

(e)

(f)

## COMPLESSITÀ DI BUILD-MAX-HEAP

LIMITE ASINTOTICO (NON STRETTO):  $O(n \log n)$

### PROPRIETÀ

IN UN HEAP CON  $n$  ELEMENTI CI SONO AL PIÙ

$\left\lceil \frac{n}{2^{h+1}} \right\rceil$  NODI DI ALTEZZA  $h$ .

$$T(n) \leq \sum_{h=0}^{\lfloor \log n \rfloor} \left\lceil \frac{n}{2^{h+1}} \right\rceil O(h) = O\left(n \cdot \sum_{h=0}^{\lfloor \log n \rfloor} \frac{h}{2^h}\right) = O(n).$$

RICORDIAMO:  $\sum_{k=0}^{\infty} x^k = \frac{1}{1-x} \quad (|x| < 1)$

PER IL TEOREMA DI DERIVAZIONE PER SERIE DI POTENZE SI HA:

$$\sum_{k=0}^{\infty} D(x^k) = D\left(\frac{1}{1-x}\right) \implies \sum_{k=0}^{\infty} k \cdot x^{k-1} = \frac{1}{(1-x)^2} \quad (|x| < 1)$$

$$\implies \sum_{k=0}^{\infty} k \cdot x^k = \frac{x}{(1-x)^2} \quad (|x| < 1)$$

QUINDI:

$$\sum_{h=0}^{\lfloor \log n \rfloor} \frac{h}{2^h} \leq \sum_{h=0}^{\infty} \frac{h}{2^h} = \frac{1/2}{(1 - 1/2)^2} = 2 = O(1).$$

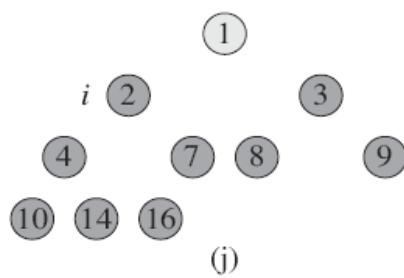

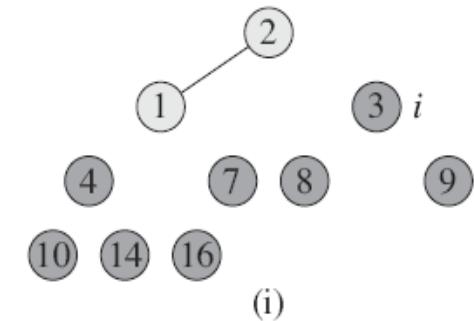

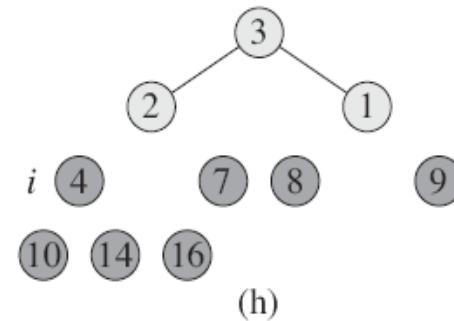

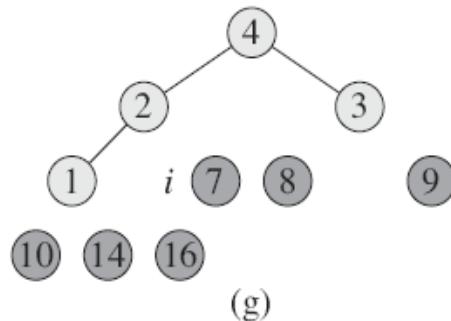

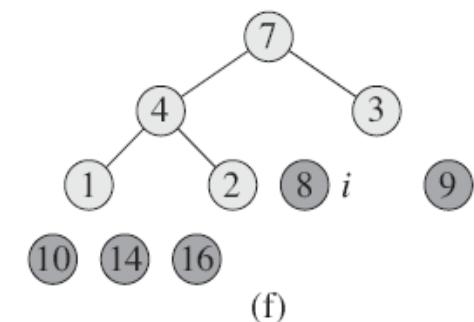

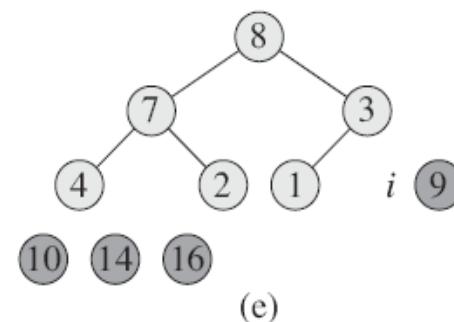

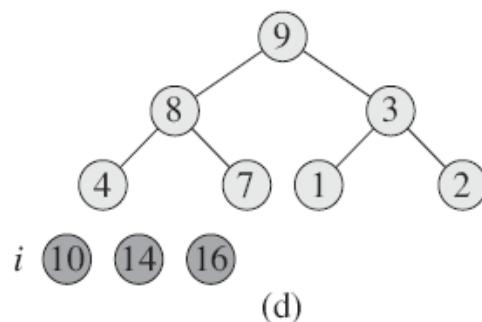

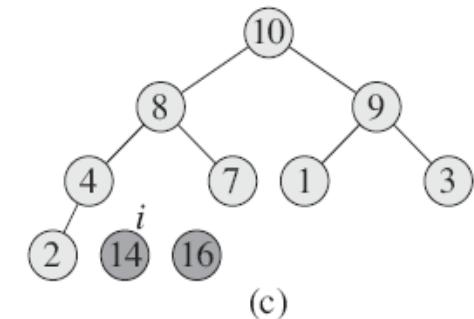

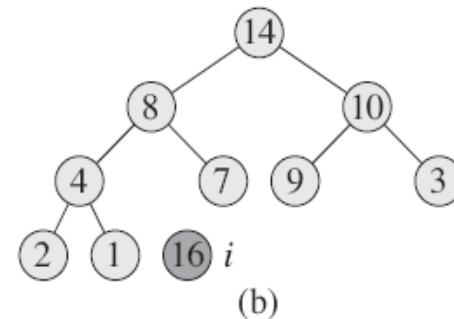

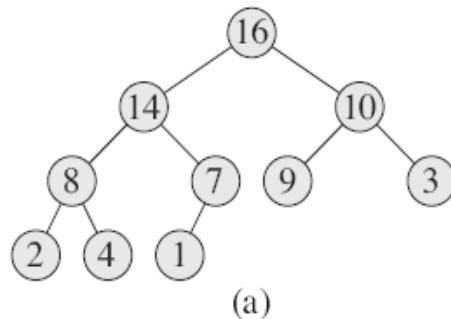

## L'ALGORITMO HEAPSORT

HEAPSORT( $A$ )

- 1 BUILD-MAX-HEAP( $A$ )
- 2 **for**  $i = A.length$  **downto** 2
- 3     exchange  $A[1]$  with  $A[i]$
- 4      $A.heap-size = A.heap-size - 1$
- 5     MAX-HEAPIFY( $A, 1$ )

COMPLESSITA':  $O(n \log n)$

# ESEMPIO

A	[1   2   3   4   7   8   9   10   14   16]
---	--

(k)

## Esercizi

### **6.1-1**

What are the minimum and maximum numbers of elements in a heap of height  $h$ ?

### **6.1-3**

Show that in any subtree of a max-heap, the root of the subtree contains the largest value occurring anywhere in that subtree.

### **6.1-4**

Where in a max-heap might the smallest element reside, assuming that all elements are distinct?

### **6.1-5**

Is an array that is in sorted order a min-heap?

### **6.1-6**

Is the array with values  $\langle 23, 17, 14, 6, 13, 10, 1, 5, 7, 12 \rangle$  a max-heap?

### 6.2-1

Illustrate the operation of MAX-HEAPIFY( $A, 3$ ) on the array  $A = \langle 27, 17, 3, 16, 13, 10, 1, 5, 7, 12, 4, 8, 9, 0 \rangle$ .

### 6.2-2

Starting with the procedure MAX-HEAPIFY, write pseudocode for the procedure MIN-HEAPIFY( $A, i$ ), which performs the corresponding manipulation on a min-heap. How does the running time of MIN-HEAPIFY compare to that of MAX-HEAPIFY?

### 6.2-3

What is the effect of calling MAX-HEAPIFY( $A, i$ ) when the element  $A[i]$  is larger than its children?

### 6.2-4

What is the effect of calling MAX-HEAPIFY( $A, i$ ) for  $i > A.\text{heap-size}/2$ ?

### 6.2-6

Show that the worst-case running time of MAX-HEAPIFY on a heap of size  $n$  is  $\Omega(\lg n)$ .

### **6.3-1**

Using Figure 6.3 as a model, illustrate the operation of BUILD-MAX-HEAP on the array  $A = \{5, 3, 17, 10, 84, 19, 6, 22, 9\}$ .

### **6.3-2**

Why do we want the loop index  $i$  in line 2 of BUILD-MAX-HEAP to decrease from  $\lfloor A.length/2 \rfloor$  to 1 rather than increase from 1 to  $\lfloor A.length/2 \rfloor$ ?

### **6.4-1**

Using Figure 6.4 as a model, illustrate the operation of HEAPSORT on the array  $A = \{5, 13, 2, 25, 7, 17, 20, 8, 4\}$ .

## CODE DI PRIORITA'

CODE DI MAX-PRIORITA' E CODE DI MIN-PRIORITA'

UNA CODA DI MAX-PRIORITA' SUPPORTA LE SEGUENTI OPERAZIONI

- $\text{INSERT}(S, x)$  : INSERISCE  $x$  IN  $S$
- $\text{MAXIMUM}(S)$  : RESTITUISCE L'ELEMENTO DI  $S$  CON LA CHIAVE MAX
- $\text{EXTRACT-MAX}(S)$  : ESTRAE DA  $S$  L'ELEMENTO CON LA CHIAVE PIÙ GRANDE E LO RESTITUISCE
- $\text{INCREASE-KEY}(S, x, k)$  : AUMENTA IL VALORE DELLA CHIAVE DI  $x$  AL NUOVO VALORE  $k$  (CON  $k$  NON INFERIORE AL VALORE CORRENTE DELLA CHIAVE DI  $x$ )

## APPLICAZIONI

CODE DI MAX-PRIORITA'

- GESTIONE PRIORITA' SU RISORSE CONDIVISE

CODE DI MIN-PRIORITA'

- SIMULATORE CONTROLLATO DA EVENTI

```
HEAP-MAXIMUM( $A$ )  
1 return  $A[1]$ 
```

---

COMPLESSITA':  $\mathcal{O}(1)$

```
HEAP-EXTRACT-MAX( $A$ )
```

```
1 if  $A.\text{heap-size} < 1$   
2     error "heap underflow"  
3  $max = A[1]$   
4  $A[1] = A[A.\text{heap-size}]$   
5  $A.\text{heap-size} = A.\text{heap-size} - 1$   
6 MAX-HEAPIFY( $A, 1$ )  
7 return  $max$ 
```

COMPLESSITA':  $\mathcal{O}(\lg n)$

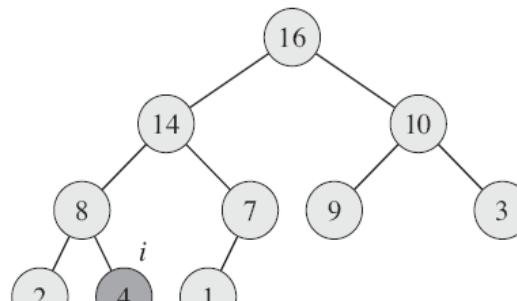

HEAP-INCREASE-KEY( $A, i, key$ )

```
1 if  $key < A[i]$ 
2   error "new key is smaller than current key"
3  $A[i] = key$ 
4 while  $i > 1$  and  $A[\text{PARENT}(i)] < A[i]$ 
5   exchange  $A[i]$  with  $A[\text{PARENT}(i)]$ 
6    $i = \text{PARENT}(i)$ 
```

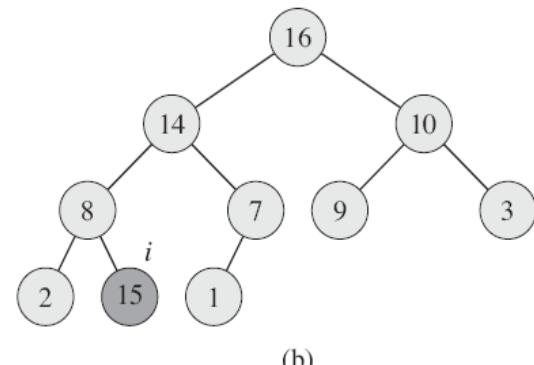

ESEMPIO

HEAP-INCREASE-KEY( $A, 9, 15$ )

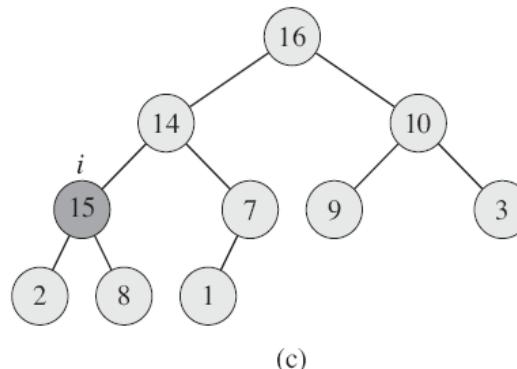

COMPLESSITÀ :  $O(\lg n)$

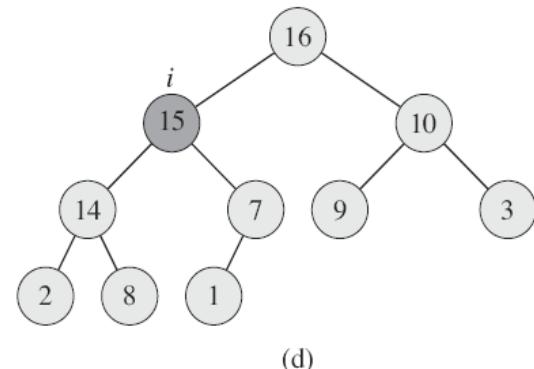

(a)

(b)

(c)

(d)

MAX-HEAP-INSERT( $A, key$ )

- 1  $A.heap-size = A.heap-size + 1$
- 2  $A[A.heap-size] = -\infty$
- 3 HEAP-INCREASE-KEY( $A, A.heap-size, key$ )

COMPLESSITÀ :  $\mathcal{O}(\lg n)$

# ESERCIZI

## 6.5-1

Illustrate the operation of HEAP-EXTRACT-MAX on the heap  $A = \langle 15, 13, 9, 5, 12, 8, 7, 4, 0, 6, 2, 1 \rangle$ .

## 6.5-2

Illustrate the operation of MAX-HEAP-INSERT( $A, 10$ ) on the heap  $A = \langle 15, 13, 9, 5, 12, 8, 7, 4, 0, 6, 2, 1 \rangle$ .

## 6.5-4

Why do we bother setting the key of the inserted node to  $-\infty$  in line 2 of MAX-HEAP-INSERT when the next thing we do is increase its key to the desired value?

## 6.5-6

Each exchange operation on line 5 of HEAP-INCREASE-KEY typically requires three assignments. Show how to use the idea of the inner loop of INSERTION-SORT to reduce the three assignments down to just one assignment.

**6.5-7**

Show how to implement a first-in, first-out queue with a priority queue. Show how to implement a stack with a priority queue.

**6.5-8**

The operation  $\text{HEAP-DELETE}(A, i)$  deletes the item in node  $i$  from heap  $A$ . Give an implementation of  $\text{HEAP-DELETE}$  that runs in  $O(\lg n)$  time for an  $n$ -element max-heap.

**6.5-9**

Give an  $O(n \lg k)$ -time algorithm to merge  $k$  sorted lists into one sorted list, where  $n$  is the total number of elements in all the input lists. (*Hint:* Use a min-heap for  $k$ -way merging.)
