Short Bio

Daniele Francesco Santamaria is Assistant Professor at the Department of Mathematics and Computer Science of the University of Catania.

He held a post-doctoral position for four years at the University of Catania, three years at the Department of Mathematics and Computer Science, and one year at the Department of Human Sciences. He also held the position of contract professor for four years, and of research scholarship for one year at the University of Catania. Moreover, he worked as an IT consultant for some small enterprises.

Daniele obtained his Ph.D. in Mathematics and Computer Science in 2019 with a work on a framework based on Computable Set Theory for reasoning with Semantic Web ontologies, focusing both on the theoretical aspects, including the engineering of the calculus and the related algorithms, and on the practical aspects, including knowledge base representation, reasoning, and management and software development. He also engineered and developed several computational ontologies for many knowledge domains, ranging from human and social sciences, including architecture and archaeology, to blockchain, cybersecurity, video games, and the theory of agents. Daniele publishes in many international journals and conferences and is involved in editorial activities with different roles such as reviewer, program committee member, and organizer. At the time of writing, he co-authored more than thirty works among workshop papers and journal articles. He holds a certification for Nvidia Cuda programming, IBM Mainframe, and Computer Forensics.

During his career, Daniele joined two international projects founded by the **Next Generation of Internet** (NGI) consortium, namely, **POC4COMMERCE** - in the ambit of the **ONTOCHAIN** initiative, and **PECS - Privacy Enrooted Car Systems** - in the ambit of the **Trustchain** initiative. He also joined an Italian national project **Progetti di Rilevante Interesse Nazionale** (PRIN) dedicated to ontological approaches in archaeology, called **Godscapes**.

He is current PI for the project MASS - A Meta-ontological Approach to Securing the Semantic Web, funded by the University of Catania.

Daniele's research interest includes not only all the theoretical and practical aspects of knowledge engineering and management, in particular in the ambit of Semantic Web ontologies, but also computational logic, algorithm engineering, and theory and practice of blockchain technologies.
